This edition of Classifications and Cross-Classifications was prepared under the direction of Shirley S. Dungee of the Industry and Commodity Classification Staff. She was assisted by John A. Barna. Kathryn H. Wright was responsible for technical supervision and review of the data. She was assisted by Jacqueline C. Utendahl. Nathaniel Swersky, George L. Tormey, and other members of the Foreign Trade Branch of the Systems Division prepared the computer programs. The participation and assistance of the staff of the Foreign Trade Division under the direction of Leonard R. Jackson are gratefully acknowledged.

Sections 10, 11, 12, 13, and 15 relating to the classifications of country designations, world areas and countries, U.S. customs districts and ports, foreign ports, and foreign trade areas are the responsibility of the Foreign Trade Division.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce field offices.

Preface

This publication brings together all schedules of commodity and geographic trade classifications and cross-classifications currently being used in the compilation and publication of U.S. foreign trade statistics. Included, for example, are the TSUSA (imports) and Schedule B (exports) classifications and their respective correlations to the categories comprising end-use and SIC-based product classifications. Schedule A (imports) and its cross-classification to TSUSA also is included as are the individual Schedule A/B classification number assignments to the item descriptions shown in the selected commodity groupings and commodity tables of Report FT 990, Highlights of U.S. Export and Import Trade. Similarly, Schedule C (both numerically and alphabetically arranged) and the individual country designations included in summary reports involving geographic trade areas are presented. Each schedule of foreign trade classifications and/or cross-classifications comprises a separate section of the publication.

The first edition of this publication was issued in 1968 in response to a long-felt need for such a document and as the result of discussions with users of the foreign trade statistics. This 1970 edition updates the information contained in the 1968 issue. This ready reference to cross-classifications, it is believed, permits better use and interpretation of commodity and geographic trade statistics in summary reports in the current program.

Unless otherwise noted, the classifications in this volume are those in effect as of January 1970.

Section 1

This section shows the commodity classifications contained in Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States, 1965 edition as revised by public bulletins B-1 through B-7, with commodity descriptions and, as applicable, units of quantity. Opposite each classification at its most detailed level (7-digit) the following codes are also shown:

1. Agricultural or nonagricultural code (1-digit): "O" indicates agricultural commodities; "1" indicates nonagricultural.

   Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

   The above guidelines which are used to classify commodities as "agricultural" are identical to those used by the Department of Agriculture, but differ from the guidelines used in the Standard Industrial Classification (SIC) of the United States.

2. End-use code (4-digits) used for rearranging and grouping basic Schedule B export data into end-use commodity categories presented in table E-7 of Report FT 990, Highlights of U.S. Export and Import Trade, and Tabulation EM 571, U.S. Exports of Domestic and Foreign Merchandise, "End-Use" Commodity Categories by Country or Area. (See Section 2 for export end-use classifications and the individual Schedule B numbers assigned to each.)

3. SIC-based product code (8-digits) used for rearranging and grouping basic Schedule B export data into SIC-based product categories in Report FT 610, U.S. Exports of Domestic Merchandise, SIC-Based Products and Area, and in Tabulation EA 676, U.S. Exports of Domestic and Foreign Merchandise—8-Digit SIC-Based Commodity by Country. (See Section 3 for export SIC-based product classifications and the individual Schedule B numbers assigned to each.)

4. SITC code (5-digits) used by the United Nations in its publication of data on U.S. foreign trade.

It should also be noted that the Standard International Trade Classification (SITC) Revised codes, are built into and provide the framework for the Schedule B classifications. At the 1-, 2-, and 3-digit levels, the Schedule B numbering system is identical with that of the SITC. The commodity coverage is not always identical, but it is believed that for most statistical purposes the coverage at the 1-, 2-, and 3-digit levels can be considered essentially comparable with that of the SITC. Reasonable comparability for statistical purposes can also be expected, in most cases, when 5-digit Schedule B numbers are identical with SITC numbers. At the 4-digit level, the retention of a SITC number in Schedule B indicates similarity of coverage, but the degree of comparability may in some cases be somewhat less at the 4-digit level for identical numbers in the two systems than at the 5-digit level.

In the column labelled "SITC code" any arbitrary 4th or 5th digit of a Schedule B code has been replaced either by (1) "O's" to indicate combinations of SITC Codes at the 4- or 5-digit level or (2) true SITC codes where it appeared that such an assignment would not significantly overcount the classification to which assigned or undercount the classification in which it partly belonged.

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

1970

SECTION 2

Correlation Between End-Use Export Classifications and Schedule B Numbers

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 2

This section shows the outline of the end-use classification scheme for recording U.S. export trade data, with the commodity description for each end-use category. The Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States, numbers assigned to each end-use category at the most detailed level (4-digit) are also shown. (See Section 1 for abbreviated Schedule B descriptions.)

The classification of U.S. export trade into broad summary commodity categories based on a concept of end-use demand was originated and developed a number of years ago by the Merchandise Trade Section, Balance of Payments Division, Office of Business Economics (OBE). It represents a regrouping of the approximately 4,000 individual commodity numbers contained in Schedule B into 115 4-digit summary commodity groupings. The 4-digit coding system permits combining of the 115 groupings into broader and broader subcategories at the 3-digit, 2-digit, and 1-digit level. At the broadest (1-digit) level, the principal end-use categories of exports emerge as follows:

0 Food, feeds, and beverages
1 Industrial supplies and materials
2 Capital goods, except automotive
3 Automotive vehicles, parts, and engines
4 Consumer goods, nonfood, except automotive
5 Special category exports (military-type goods)
6 Exports, n.e.c., and reexports

Data for all the 115 export end-use groupings, together with the 3-, 2-, and 1-digit subcategories and categories into which they combine, are presented in table E-7 of Report FT 990, Highlights of U.S. Export and Import Trade, and in Tabulation EM-571, U.S. Exports of Domestic and Foreign Merchandise, "End-Use..." While end-use demand has fundamentally determined the assignment and regrouping of the basic Schedule B export commodity classifications into major summary categories, other factors have governed the formation of smaller breakdowns within the broader categories. These subdivisions are intended to reflect the intrinsic physical nature of a commodity or its stage of production. Thus nonfood commodity categories are broken down into manufactured vs. unmanufactured, durable vs. nondurable, and agricultural vs. nonagricultural. (See Section 1 for the guidelines used to classify commodities as "Agricultural.")

The end-use classification system provides a convenient and efficient statistical tool for broadly descriptive analyses of short-and long-run movements in U.S. exports. It is particularly useful, moreover, for econometric analysis and "forecasting" whereby judiciously selected end-use groupings are correlated to appropriate economic indicators of domestic and foreign demand.

Correlation Between SIC-Based Export Product Classifications and Schedule B Numbers

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 3

This section shows the rearrangement of approximately 4,000 individual commodity classifications contained in Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States, into approximately 2,400 8-digit commodity classes based on the Standard Industrial Classification (SIC). (See Section 1 for abbreviated Schedule B descriptions.) Data in this arrangement are shown in Report FT 610, U.S. Exports of Domestic Merchandise, SIC-Based Products and Area, and in tabulation EA-676, U.S. Exports of Domestic and Foreign Merchandise, 8-Digit SIC-Based Commodity by Country Arrangement.

For the purpose of relating exports to output, the 5-digit product classes of the Numerical List of Manufactured Products, 1967 Census of Manufactures (MC67-2) were used as the starting point for manufactured products, and the 4-digit industry codes of the SIC, subdivided into 5-digit homogeneous classes of commodities, were used as the starting point for nonmanufactured products. Individual Schedule B numbers were then assigned to the SIC product class containing the same products as the Schedule B code. In instances where Schedule B numbers included items which should be classified in two or more SIC output product codes, an assignment was made to the SIC output product code in which principal content of the Schedule B numbers appeared to belong, where such an assignment would not significantly overcount the classification to which the Schedule B number was assigned or significantly undercount others in which it partly belonged. Where it appeared that assigning the entire content of a Schedule B number to a single SIC output product code would seriously distort the classification, the principal 5-digit output product codes were combined for the purposes of this presentation and the Schedule B number assigned to the combination. Such 5-digit combinations can be identified by the sixth digit of the code which can be interpreted as follows:

"O" No combination
"A" All within the same 4-digit class
"B" All within the same 3-digit class but some different 4-digit classes
"C" All within the same 2-digit class but some different 3-digit classes
"D" All within the same division but some different 2-digit classes
"E" Within different divisions
"X" All 5-digit classes within the same 4-digit (or 3-digit) are included

The 7th and 8th digits are further subdivisions of the 6-digit codes which have been made to yield export classifications comparable to output classifications within the framework of SIC.

Since there are basic structural differences between Schedule B and SIC, a complete and precise presentation of exports in terms of the output commodity classification based on the SIC is not possible. However, this arrangement does identify the areas where exports and output are most comparable, and presents the information in convenient form for further summarization to 4-digit, 3-digit, and 2-digit SIC levels.

SECTION 4

Correlation Between Selected Schedule B Export Commodity Groupings and Commodities

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 4

This section shows the Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States (1965 edition as revised by Public Bulletins B1 through B7), commodity number composition of the selected commodity groupings and commodities described in export commodity summary tables E-2, E-5, and E-6 of Report FT 990, Highlights of U.S. Export and Import Trade. In general, the data presented in the export commodity-oriented summary tables include Schedule B section (1-digit) totals, selected division (2-digit), group (3-digit), and subgroup (4-digit) totals and totals for leading commodities (7-digit) or combinations of commodities. (See Section 1 for abbreviated Schedule B descriptions.) The data presented in terms of these categories are intended to reflect the current pattern or highlights of U.S. export trade and help to satisfy the growing need for U.S. statistics in a form readily comparable with trade data of other countries without requiring the individual user to prepare his own summaries from the detailed commodity reports.

SECTION 5

Correlation Between TSUSA Import Classifications and Agricultural, Nonagricultural, End-Use, Schedule A, and SIC-Based Product Codes

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 5

This section lists the approximately 10,000 statistical classification numbers in the Tariff Schedules of the United States Annotated (TSUSA), 1970 edition, as amended, together with abbreviated commodity descriptions and, as applicable, units of quantity. Also alined under their respective columns opposite each TSUSA classification are the following additional codes used in defining or grouping TSUSA classifications in terms of the indicated statistical categories:

1. Agricultural and nonagricultural code (1 digit): "O" indicates agricultural commodities; "1" indicates nonagricultural. (See Section 1 for the guidelines used to classify commodities as "Agricultural".)

2. End-use code (4-digits) used for rearranging and grouping basic TSUSA import data into end-use commodity categories. Table I-8 of Report FT 990, Highlights of U.S. Export and Import Trade, and Tabulation IM 171, U.S. General Imports of Merchandise, "End-Use" Commodity Categories by Country or Area, use this classification scheme. For a correlation between end-use import classifications and TSUSA numbers, see Section 7 of this publication.

3. Schedule A number (7-digits) used for rearranging and grouping basic TSUSA import data into Schedule A, Statistical Classification of Commodities Imported into the United States, which is a classification system based on the Standard International Trade Classification (SITC), Revised. This commodity data is presented in monthly Report FT 135, U.S. Imports for Consumption and General Imports, Schedule A Commodity by Country. For a correlation between Schedule A import classifications and TSUSA numbers, see Section 6 of this publication.

4. SIC-based product code (8-digits) used for rearranging and grouping basic TSUSA import data into SIC-based product categories in Report FT 210, U.S. Imports for Consumption and General Imports, SIC-Based Products and Area, and in the Tabulation IA 276, U.S. Imports for Consumption and General Imports, 8-digit SIC-Based Commodity by Country. For a correlation between SIC-based import product classifications and TSUSA Numbers, see Section 8 of this publication.

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

SECTION 6

Correlation Between Schedule A Import Classifications and TSUSA, SITC, and FT 990 Codes

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 6

This table shows the outline of Schedule A, Statistical Classification of Commodities Imported into the United States, with abbreviated commodity descriptions for the 1-, 2-, 3-, and 4-digit levels of summarization. For the detailed 7-digit Schedule A classifications both abbreviated commodity descriptions and units of quantity are shown, as well as the individual TSUSA numbers which are assigned to the Schedule A classification and the SITC codes used by the United Nations in reporting foreign trade data for the United States.

Schedule A rearranges and summarizes the approximately 10,000 commodity classifications of the Tariff Schedules of the United States Annotated (TSUSA) into approximately 2,400 7-digit Schedule A classifications within the framework of the Standard International Trade Classification (SITC), Revised. The numbering system provides for meaningful summaries of commodity coverage at 5-, 4-, 3-, 2-, and 1-digit levels of detail. At the 1-, 2-, and 3-digit levels, the numbering system of Schedule A is identical with that of the SITC. The commodity coverage is not always identical, but it is believed that for most statistical purposes the coverage at the 1-, 2-, and 3-digit levels can be considered essentially comparable with that of the SITC. Reasonable comparability for statistical purposes can also be expected, in most cases, when 5-digit Schedule A numbers are identical with SITC numbers. At the 4-digit level the retention of a SITC number in Schedule A indicates similarity of coverage, but, the degree of comparability may in some cases be somewhat less at the 4-digit level for identical numbers in the two systems than at the 5-digit level.

The 6th and 7th digits are added to provide more detailed breakdowns where such detail appears to be justified to reflect U.S. import trade characteristics. To this extent the detail shown is determined largely on the magnitude of trade in the various TSUSA commodities arranged within the SITC framework, with the two objectives of providing detailed data for commodities important in the U.S. import trade while also providing data in terms of the SITC outline which are comparable, insofar as possible, with foreign trade statistics compiled by other trading nations.

In the column labeled "SITC code" any arbitrary 4th or 5th digit of a Schedule A code has been replaced either by (1) o's to indicate combinations of SITC codes or (2) a true SITC code where it appeared that such an assignment would not significantly overcount the classification to which it was assigned or undercount the classification in which it partly belonged.

Correlation Between End-Use Import Classifications and TSUSA Numbers

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 7

This table shows the outline of the end-use classification scheme for recording U.S. import trade data, with the commodity description for each end-use category. The 7-digit Tariff Schedules of the United States Annotated (TSUSA) numbers assigned to each end-use category at the most detailed (4-digit) level are also shown. (See Section 5 for abbreviated TSUSA Descriptions.)

The classification of U.S. import trade into broad summary commodity categories based on a concept of end-use demand was originated and developed a number of years ago by the Merchandise Trade Section, Balance of Payments Division, Office of Business Economics (OBE). It represents a regrouping of the 10,000 individual commodity numbers contained in the basic import commodity classification schedule (TSUSA) into 112 4-digit summary commodity groupings. The 4-digit coding system permits combining of the 112 groupings into broader and broader subcategories at the 3-digit, 2-digit, and 1-digit level. At the broadest (1-digit) level, the principal end-use categories of imports emerge as follows:

0 Foods, feeds, and beverages
1 Industrial supplies and materials
2 Capital goods, except automotive
3 Automotive vehicles, parts, and engines
4 Consumer goods, nonfood, except automotive
5 Imports, n.e.s.

Data for all the 112 import end-use groupings, together with the 3-, 2-, and 1-digit subcategories and categories into which they combine, are presented in table I-8 of Report FT 990, Highlights of U.S. Export and Import Trade, and in Tabulation IM 171, U.S. General Imports of Merchandise, "End-Use" Commodity Categories.... While end-use demand has fundamentally determined the assignment and regrouping of the basic TSUSA import commodity classifications into major summary categories, other factors have governed the formation of smaller breakdowns within the broader categories. These subdivisions are intended to reflect the intrinsic physical nature of a commodity or its stage of production. Thus nonfood commodity categories are broken down into manufactured vs. unmanufactured and durable vs. nondurable.

The end-use classification system provides a convenient and efficient statistical tool for broadly descriptive analyses of short- and long-run movements in U.S. imports. It is particularly useful, moreover, for econometric analysis and forecasting whereby judiciously selected end-use groupings are correlated to appropriate economic indicators of domestic and foreign demand.

SECTION 8

Correlation Between SIC-Based Import Product Classifications and TSUSA Numbers

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 8

This section shows the rearrangement of approximately 10,000 statistical classification numbers contained in Tariff Schedules of the United States Annotated (TSUSA), into approximately 2,400 8-digit commodity classes based on the Standard Industrial Classification (SIC). (See Section 5 for abbreviated TSUSA descriptions.) Data in this arrangement are presented in FT 210, U.S. Imports for Consumption and General Imports, SIC-Based Products and Area, and in Tabulation IA-276, U.S. Imports of Merchandise for Consumption and General Imports, 8-digit SIC-Based Commodity by Country Arrangement.

For the purpose of relating imports to output, the 5-digit product classes of the Numerical List of Manufactured Products, 1967 Census of Manufactures (MC 67-2) were used as the starting point for manufactured products, and the 4-digit industry codes of the SIC, subdivided into 5-digit homogeneous classes of commodities, were used as the starting point for nonmanufactured products. Individual TSUSA numbers were then assigned to the SIC product class containing the same products as the TSUSA code. In instances where TSUSA numbers included items which should be classified in two or more SIC output product codes, an assignment was made to the SIC output product code to which the principal content of the TSUSA numbers appeared to belong, where such an assignment would not significantly overcount the classification to which the TSUSA number was assigned or significantly undercount others in which it partly belonged. Where it appeared that assigning the entire content of a TSUSA number to a single SIC output product code would seriously distort the classification, the principal 5-digit output product codes were combined for this presentation and the TSUSA number assigned to the combination. Such 5-digit combinations can be identified by the 6th digit of the code which can be interpreted as follows:

"O" No combination
"A" All within the same 4-digit class
"B" All within the same 3-digit class but some different 4-digit classes
"C" All within the same 2-digit class but some different 3-digit classes
"D" All within the same division but some different 2-digit classes
"E" Within different divisions
"X" All 5-digit classes within the same 4-digit (or 3-digit) are included.

The 7th and 8th digits are further subdivisions of the 6-digit codes which have been made to yield import classifications comparable to output classifications within the framework of SIC.

Since there are basic structural differences between TSUSA and SIC, a complete and precise presentation of imports in terms of the output commodity classification based on the SIC is not possible. However, this arrangement does identify the areas where imports and output are most comparable, and presents the information in convenient form for further summarization to 4-digit, 3-digit, and 2-digit SIC levels.

SECTION 9

Correlation Between Selected Schedule A Import Commodity Groupings and Commodities and Schedule A Numbers

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 9

This section shows the Schedule A, Statistical Classification of Commodities Imported into the United States, commodity number composition of the selected commodity groupings and commodities described in import commodity summary tables I-2, I-6, and I-7 of Report FT 990, Highlights of U.S. Export and Import Trade. In general, the data presented in the import commodity-oriented summary tables include Schedule A section (1-digit) totals, selected division (2-digit), group (3-digit), and subgroup (4-digit) totals, and totals for leading commodities (7-digit) or combinations of commodities. (See Section 6 for abbreviated Schedule A descriptions.) The data presented in terms of these categories are intended to reflect the current pattern or highlights of U.S. import trade and help to satisfy the growing need for U.S. statistics in a form readily comparable with trade data of other countries without requiring the individual user to prepare his own summaries from the detailed commodity reports.

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

1970

SECTION 10

Schedule C—Classification of Country Designations

A. Numeric Arrangement

B. Alphabetic Arrangement

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 10

As indicated by the title, Schedule C is the classification schedule which contains the country designations used in compiling the U.S. foreign trade statistics. Information regarding the country of origin for imports and the country of destination for exports is required to be reported by importers and exporters, respectively, for shipments entering and leaving the United States. Country of origin and destination data are compiled along with commodity and other data regarding foreign trade transactions and the country information is included in statistical reports released by the Bureau of the Census.

Schedule C in numeric arrangement (Part A of Section 10) lists each country designation for which separate foreign trade statistics are compiled, along with the 3-digit codes assigned to the country designations to facilitate the compilation and reporting of the statistics. Abbreviated country designations, which are shown in lieu of complete country names in some foreign trade reports because of limited space, are also given. To provide clarification of the coverage of particular designations, in many instances listings are included of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country designation for statistical purposes. The foreign country designations are arranged in the numeric schedule by continent and are listed in sequence within each continent generally from north to south and east to west. Codes for Puerto Rico and U.S. possessions are shown at the end of the schedule. A listing in alphabetic arrangement of the countries, territories, islands, etc., with their numeric codes appears in part B of this section. The classifications shown in parts A and B are those in effect through December 1970. These classifications are the same as those shown in the January 1, 1970, edition of Schedule C.

While Schedule C is primarily a geographic classification of countries, its structure makes it possible to obtain summarizations of data in terms of various economic as well as geographic groupings. For a list of such groupings for which foreign trade data are currently being compiled, see Section 11, World Areas and Countries.

Schedule C in numeric arrangement is published as a part of Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States. Both the numeric and alphabetic arrangements of the schedule are included as Annex B in Tariff Schedules of the United States Annotated.

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

1970

SECTION 11

World Areas and Countries

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 11

In order to meet the needs of many users of foreign trade statistics, data are compiled showing U.S. imports from and exports to various geographic and economic world areas. The areas for which statistics are currently being compiled and the individual countries included in each area are shown on the list presented in this section. The areas represent groupings of individual countries classified separately in Schedule C, Classification of Country Designations For U.S. Foreign Trade Statistics, with the exceptions of Canada, the United Kingdom, and Japan, which are treated as separate individual areas. (Schedule C is presented in Section 10.)

The statistics for world areas are obtained by summarizing the data reported for individual countries into the specified geographic and economic groups. Totals are provided for six major geographic areas of the world: Western Hemisphere, Western Europe, Communist Areas in Europe, Asia, Australia and Oceania, and Africa. Three of the major areas (Western Hemisphere, Western Europe, and Asia) are divided into additional groupings, some of which are further subdivided into smaller categories. Thus , Western Europe is divided into two primary categories: (1) Organization for Economic Cooperation and Development Countries and (2) Other Western Europe. The OECD category is divided into three categories: (1) European Economic Community, (2) European Free Trade Association, and (3) Other OECD Countries. The European Free Trade Association is further divided into two categories: (1) United Kingdom and (2) Other EFTA Countries. Similar breakdowns into primary and secondary categories occur within the other major areas of Western Hemisphere and Asia.

Current monthly and cumulative information on U.S. trade with individual world areas is presented in Report FT 990, Highlights of U.S. Export and Import Trade. Annual data are presented in the following reports: FT 150, U.S. General Imports, Schedule A Commodity Groupings, World Area, Country, and Method of Transportation; FT 155, U.S. General Imports, World Area, Country, Schedule A Commodity Groupings, and Method of Transportation; FT 450, U.S. Exports, Schedule B Commodity Groupings, World Area, Country, and Method of Transportation; and FT 455, U.S. Exports, World Area, Country, Schedule B Commodity Groupings, and Method of Transportation.

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

1970

SECTION 12

Schedule D—Classification of U.S. Customs Districts and Ports

A. Numeric Arrangement

B. Alphabetic Arrangement

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 12

Schedule D provides a list of U.S. customs districts, the ports included under each district, and the corresponding numeric codes used in compiling the U.S. foreign trade statistics. The schedule contains a code for each official U.S. customs district and port, with some additional codes privided to meet specific compiling requirements of the foreign trade statistical program. The underlined port of each district is the headquarters port for the district.

The district and port classifications shown are those in effect December 31, 1970 (classifications published in the January 1, 1970, edition of the schedule, as amended by Public Bulletin D-1, issued July 21, 1970). In Part A, the classifications are listed in the order of the numeric customs district and port codes, while Part B lists the ports in alphabetic arrangement. A list of the nine official U.S. customs regions, showing the districts included in each region, is also included in Part A. Totals for import and export trade through individual customs regions and/or districts are published monthly in Report FT 990, Highlights of U.S. Export and Import Trade. More detailed customs district information is presented in monthly import and export tabulations (identified as IM and EM, respectively) as follows: IM 154 and EM 563, in district by country by commodity arrangement; IM 136 and EM 531, in country by commodity by district arrangement; and IM 145 and EM 522, in commodity by country by district arrangement.

A list of the six U.S. coastal districts, showing the customs districts or ports included under each coastal district, also appears at the end of Part A. Waterborne trade data for U.S. coastal districts appear in Report FT 985 as well as import tabulations SM 311/311 IT and export tabulations SM 711/711 IT. Further information regarding the availabilty of any of the above-mentioned data may be obtained from Department of Commerce Field Offices or the Bureau of the Census.

Schedule D is published as a part of Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States, and is also included as Annex A in Tariff Schedules of the United States Annotated.

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

1970

SECTION 13

Schedule K—Classification of Foreign Ports by Geographic Trade Area and Country

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

This schedule lists the major ports of the world directly handling waterborne shipments in the foreign trade of the United States and the numeric code numbers by which such ports are designated in tabulations such as SM 305 and 705. The ports are grouped according to the country arrangement in Schedule C, Classification of Country Designations, effective January 1970.

Within various countries and regional areas, groups of individual ports have been combined under single code numbers described as "all other ports." The ports listed in these basket categories represent smaller ports whose participation in the foreign trade to date have been of insufficient importance to warrant the compilation and presentation of separate data. For some countries more than one of these basket categories have been listed to facilitate the segregation of traffic in terms of trade areas or trade routes.

Under certain conditions, a vessel has the option of discharging cargo at one of two or more foreign ports. For some foreign areas, optional discharge port cargo represents a significant amount of total cargo unladen. The more important of the optional port combinations are assigned separate code numbers and are referred to as "optional ports in..."

In order to furnish further identification of ports in Canada and the Philippines, each of which contains a particularly large number of ports engaged in waterborne traffic with the United States, abbreviations have been inserted beside the port names to show the Canadian province or territory and, in the case of the Philippines, to show the island in which the designated ports are located. Small islands located off the shore of major islands in the Philippine Archipelago have been generally identified by the abbreviation for the larger islands. The abbreviations used are as follows:

CANADA

BC	British Columbia	NS	Nova Scotia
CBI	Cape Breton Island	ONT	Ontario
LAB	Labrador	PEI	Prince Edward Island
MAN	Manitoba	QUE	Quebec
NB	New Brunswick	YT	Yukon Territory
NFLD	Newfoundland	X	High or Deep Sea (for fishing vessels)

LUZ	Luzon	SIB	Sibuyan
MAR	Marinduque	SIQ	Siquijor
MAS	Masbate	TIC	Ticao
MIN	Mindanao		

Shown in this section are the 4-digit "country/area" codes and descriptions used in compiling the tonnage data which are released in tabulations SM 705, Supplement and SM 711, Supplement. These tabulations contain shipping weight data for U.S. waterborne exports of Department of Defense Military Assistance Program--Grant-Aid-Shipments combined with commercial "Special Category" shipments.

SECTION 14

Schedule P—Commodity Classification for Reporting Shipments from Puerto Rico to the United States

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 14

This schedule governs in the classification of commodities shipped from Puerto Rico to the United States. Commodity information for such shipments is required to be reported on the Shipper's Export Declaration, Commerce Form 7525-V (including 7525-V--Alternate) in terms of the quantity units and 5-digit Schedule P code numbers in the schedule. Commodity descriptions on the declarations must contain the information necessary to identify the merchandise exclusively with the appropriate 5-digit code.

The Schedule P commodity classification scheme represents an arrangement within the framework, and insofar as practical, within the numbering system of the 1965 edition (as revised by Public Bulletins B-1 through B-7) of Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States. (The Schedule B commodity numbers or ranges of numbers encompassed by each 5-digit Schedule P code are shown in this document for reference purposes only.) Trade data are published in terms of these Schedule P classifications on a monthly and annual basis in Report No. FT 800, U.S. Trade with Puerto Rico and U.S. Possessions.

		Special transactions, not classified according to kind:

		Shippers use this number instead of the regular schedule P number as follows:	
		(A) For any item classifiable under a schedule P number for which the total value reported on the same export declaration is less than $250.	
		(NOTE: Where more than one item classifiable under the same number is reported on a single export declaration and the total value for the items under that number on the declaration is $250 or more, use the regular number for each of the items, even if some or all of them are valued less than $250. For example, if plastic salad sets valued at $150 and plastic trays valued at $105 are reported on the export declaration, both should be classified under number 89309, since they are both classifiable under this same number and their combined value is more than $250. Number 89309, should also be used for both items if the plastic salad sets are valued at $70 and the plastic trays at $260. However, if necklaces valued at $150, regularly classifiable under 89721, and advertising folders valued at $105, regularly classifiable under 89200, are reported on the same export declaration and there are no other items on the same declaration classifiable under either of these numbers, both items should be reported under 93101.)	
		(B) For groupings of miscellaneous items, each item meeting the specifications described in (A) above and each item classifiable under a different schedule P number. A general description may be used on the export declaration for groupings of such items, but the description should specify that each item included is less than $250.	
		Where two or more individual items meeting the specifications in (A) above are reported on the same export declaration, a separate description and separate value for each such item is not required. The combined value (even though totaling more than $250) may be shown in column 15, and a general description may be shown in column 10, such as--Miscellaneous articles, each valued less than $250.

SECTION 15

Schedule R—Classification and Definitions of Foreign Trade Areas

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Section 15

This schedule lists the foreign trade areas which appear in Report FT 985, U.S. Waterborne Foreign Trade and in the waterborne tabulations SM 311 and SM 711. The trade areas are defined in terms of the foreign ports shown in the 1970 edition of Schedule K, Classification of Foreign Ports by Geographic Trade Area and Country. Brief descriptions are provided of the general geographic limits covered by the various trade areas as well as the individual foreign port ranges which are included under each.

[1]Symbols used in the SIC-based export numbers represent combinations of two or more whole 5-digit SIC product classes, as follows:

A--all within the same 4-digit class,
B--all within the same 3-digit but some different 4-digit classes,
C--all within the same 2-digit but some different 3-digit classes,
D--all within the same division but some different 2-digit classes,
E--within different divisions,
X--all 5-digit classes within the same 4-digit (or 3-digit) are included.

[2]Export data in this detail are not available.

[3]"X" does not indicate a combination and is used only as an instrument to obtain the desired numbering sequence.

[4]Part of this SIC-based output product code is assigned to other SIC-based export product codes.

[1]Symbols used in the SIC-based export numbers represent combinations of two or more whole 5-digit SIC product classes, as follows:

A--all within the same 4-digit class,
B--all within the same 3-digit but some different 4-digit classes,
C--all within the same 2-digit but some different 3-digit classes,
D--all within the same division but some different 2-digit classes,
E--within different divisions,
X--all 5-digit classes within the same 4-digit (or 3-digit) are included.

[2]Export data in this detail are not available.

[3]"X" does not indicate a combination and is used only as an instrument to obtain the desired numbering sequence.

[4]Part of this SIC-based output product code is assigned to other SIC-based export product codes.

[1]Symbols used in the SIC-based import numbers represent combinations of two or more whole 5-digit SIC product classes, as follows:

A - all within the same 4-digit class,
B - all within the same 3-digit but some different 4-digit class,
C - all within the same 2-digit but some different 3-digit classes,
D - all within the same division but some different 2-digit classes,
E - within different divisions,
X - all 5-digit classes with the same 4-digit (or 3-digit) are included.

[2]Import data in this detail are not available.

[3]"X" does not indicate a combination and is used only as an instrument to obtain the desired numbering sequence.

[4]Part of this SIC-based output product code is assigned to other SIC-based import product codes.

[1]Symbols used in the SIC-based import numbers represent combinations of two or more whole 5-digit SIC product classes, as follows:

A - all within the same 4-digit class,
B - all within the same 3-digit but some different 4-digit classes,
C - all within the same 2-digit but some different 3-digit classes,
D - all within the same division but some different 2-digit classes,
E - within different divisions,
X - all 5-digit classes within the same 4-digit (or 3-digit) are included.

[2]Import data in this detail are not available.

[3]"X" does not indicate a combination and is used only as an instrument to obtain the desired numbering sequence.

[4]Part of this SIC-based output product code is assigned to other SIC-based import product codes.
